

PRODUCTS & SERVICES

SimplyHome System By communicating with multiple sensors to observe activities of daily living, the *SimplyHome System* can proactively prompt the individual through a speaker in their home or text, email, or phone call. The *SimplyHome System* alerts caregivers and loved ones of changes in behavioral patterns. Text, email or phone alerts can be generated by a single event, an intersection of multiple events, or by inactivity. The *SimplyHome System* can also control something in one's home environment. For example, turning on smart lights when an individual gets out of bed.

Remote Support Tablet a user-friendly two-way audio and video tablet by NucleusCare keeps individuals connected to their care team while living independently. Remote support team members can drop in for video check-ins, schedule reminder messages, and perform wellness checks with ease.

Personal Emergency Response System A pre-programmed base unit and water resistant pendant allows the individual to press a button for rapid assistance from our 24/7 call center, connecting the individual to their care team, or emergency services when immediate assistance is needed.

Medication Dispenser A locked, programmable medication dispenser that features automated alerts, including calls, texts, or emails. The Medication Dispenser prompts the individual to take the appropriate dose of medication on schedule and keeps medication secure when it is not time to take it.

Environmental Controls EC systems enable individuals with limited mobility to remotely operate lights, doors, smart thermostats, and more via tablet or switch controls. EC systems can be paired with the *SimplyHome System*.

Ring Video Doorbell® Allows the individual to see and speak with visitors from anywhere using a smartphone or tablet. The caregiver can also receive instant alerts when someone presses the button on the individual's Ring® Video Doorbell or motion is detected outside the home. The Ring® Video Doorbell can be integrated with the *SimplyHome System* to support a variety of person-centered outcomes and ensure safety.

Remote Support & Virtual Care Management® Remote support services from *SimplyHome* are provided by trained Remote Direct Support Professionals (rDSPs) using the most appropriate means of virtual support for each person. rDSPs are trained on each individual's support plan, they can contact local emergency support if needed, and they remain connected with in-person care team members should there be a need for in-person support.

Virtual Care Management® is the model for virtual client care. A highly trained Virtual Care Specialist reviews trends in data from our technologies and consults with families, caregivers, and clients to plan routines and services that enhance daily living.

SimplyHome Technology: Concerns Addressed

Calling for Help

When people with disabilities and senior adults choose to live independently, they may need assistance from their care team, family, or emergency services. Our *SimplyHome* systems quickly notify the care team when concerns arise where an individual may need assistance. Wearable pendants and switch controls can also be programmed, so an individual can connect with their support team at a click of a button.

Cooking Safety

Support individuals during cooking, baking, and meal preparation routines. Caregivers or staff can be alerted if concerns arise, such as the stove or other appliances being left on. This system primarily focuses on skill building and technology in the kitchen, creating support for safety and independence.

Falls & Inactivity

Caregivers are often concerned that living independently means that individuals could fall or experience a crisis and not be able to access help. Our technology senses motion, falls, and inactivity and can alert caregivers, staff, and family members when assistance may be needed.

Wandering & Elopement

Wandering and elopement are key safety issues that often require additional support by staff, caregivers, and family members. Our remote support system can enable staff and caregivers to respond proactively and redirect behaviors when individuals wander or exit the home.

Environmental Controls

Environmental Controls (EC) enable people with physical disabilities, limited mobility, or paralysis to control their home environment. EC systems support residential independence through tablets that use touch or switch controls to manage lights, thermostat, doors, and other devices.

Medication Safety & Compliance

SimplyHome's secure medication dispensers and remote support systems can prompt individuals to take the appropriate medications on schedule, keep medications secure when it is not time to take them, and provide alerts and notifications if medication is not accessed.

Staff Connection

The *SimplyHome* Responder app makes it easy for teams to stay connected and streamline client care from any mobile device. In-person support staff can immediately respond to support needs, see real-time updates of client technology, and can complete necessary check-ins and tasks required as a part of an individual's support plan.
